Pain Parity for Indiana

Preventing Opioid Use Disorder Before It Begins

Pain is one of the most common reasons people visit their doctor.

Each year, nearly 80 million Americans' seek treatment to manage acute pain symptoms and opioids are often prescribed as a solution. While they can be effective, they can also pose significant health risks and increase chances of opioid dependency.

But breakthroughs in pain medication are enabling patients to have a choice in their pain management. Amidst the ongoing opioid epidemic, it is critical that patients have access to the treatments they want and need to address their pain.

Need for increased access to all pain treatment options

- Within one year of receiving an opioid medication to manage acute pain, approximately 85,000 Americans were diagnosed with an opioid use disorder.iii
- Prescribing rates have fallen, but opioid use disorders and overdoses remain high. In 2023, Indiana reported:
 - More than 5,000 opioid-overdose related emergency room visitsiv
 - More than 1,700 opioid overdose deaths^v
 - A dispensing rate of 49.4 opioid prescriptions per 100 persons^{vi}
 - A naloxone dispensing rate of 0.8 per 100 persons^{vii}
- Furthermore, in Indiana, opioid use disorder cost Medicaid over \$783 million in excess costs in 2022.viii

Pain parity legislation for equal access to pain treatment options

Across the country, states are introducing legislation to expand access to non-opioid treatments and therapies. These policy efforts, often referred to as "pain parity" legislation, address the health insurance barriers many patients face when trying to access non-opioid treatment options. Pain parity legislation ensures patients are not disadvantaged when accessing non-opioid options by:

- · Prohibiting the use of utilization controls such as prior authorization and step therapy
- · Equalizing cost-sharing for the non-opioid prescription drug and the opioid prescription drug

Pain parity legislation in Indiana

In Indiana there is important legislation focused on pain parity to help patients and families.

H.B. 1358

State Representative Gregory Porter (D-96) introduced H.B. 1358, a bill that aims to reduce barriers to non-opioid treatments by:

- Prohibiting stricter coverage restrictions under Medicaid and the Children's Health Insurance Program for FDAapproved non-opioids compared to opioids to treat or manage pain
- Prohibiting health insurers and health maintenance organization contracts from applying greater coverage restrictions on non-opioid prescribed drugs than on opioid drugs

Contact your representative to let them know Indiana needs pain parity and help prevent addiction before it begins.
